Defects

Defects and notes

- The below points appeared during my task and some of them might be defects and some might be just as required.

  - The consent screen keeps appearing while I was using the same device and the same account.

  - The received code is not active after a while and the expiration time was not mentioned in the received message.

  - The private key import process happened to appear every time I switch between Appium session and manual execution while I'm using the same device.

- The below defects I assume they are some minor issues yet I will present them as a defect as part of the task
